
Stage 1: monitoring and detection
User
sends requests
Main agent
works on each request
Plugin & orchestrator
record each turn
Detector
did requirements change?
no: wait for the next turn
Stage 2: exploration
Auditor
names 2-5 directions
Workers
one per direction + one open
new requests reach workers as they arrive
Validity checks
tests intact & real code change
none pass: stop
Stage 3: review
Critics
three anonymous reviews
Chairman
picks one & lists changes
nothing worth sending: stop
Final worker
continues that design
new requests still arrive
Final check
tests on its starting code
failures listed; can't run: stop
Stage 4: delivery and decision
Delivery
nudge at a turn gap
Main agent
reviews & recommends
User
agrees or declines
Applied
all, part, ideas or none
Model/agent call
Sailbox
User's machine
